

## Anodized Aluminum Ladder Rack Instructions

- Always load and unload your rack from the rear of vehicle.
- Always load your rack by hand, not with equipment or machinery
- Evenly displace load over weight bearing legs, from front to back
- Evenly displace load from drivers side to passenger side
- Always secure materials / ladders with straps
- Periodically check mounting hardware and tighten if necessary
- Always use good judgement and drive safe
- Never use or load a damaged ladder rack !

You have purchased a quality, custom fabricated, ladder rack. Treat it with care and you will have many years of use. We can't guarantee load carrying capacities, due to a number of factors. Everyone drives differently. Suspension varies from vehicle to vehicle. Braking and stopping are variable depending on individual habits. Road conditions vary. Again use good judgement and common sense when driving. We will not be responsible for unsecured loads, over loaded racks, accidents, misuse or lack of good judgement. It is your responsibility to transport your materials safely!
